

International Workshop on Wearable Robotics

14-19 SEPTEMBER 2014, SPAIN

The 2014 International Workshop on Wearable Robotics is organised by the Bioengineering Group at the Spanish National Research Council (CSIC), the Cullen College of Engineering at the University of Houston, the Tecnológico de Monterrey and the University of Twente.

International speakers from academia, government, industry, medical centers, and end users will discuss challenges and potential application in clinical rehabilitation and assistive technologies.

WHO'S ATTENDING

Innovators from around the world will discuss challenges and potential solutions leading to the development of wearable robotics technologies supporting advanced therapeutic interventions in major neurological diseases, e.g. Cerebrovascular Accidents (CBA), Spinal Cord Injury (SCI), Traumatic Brain Injury (TBI), Cerebral Palsy (CP).

PROJECTS

International Projects from America, Europe and Asia, including patient-in-the-loop demonstrations of wearable exoskeletons will be presented during the event.

EXHIBITORS/SPONSORS

Limited exhibitor space is available to bring the newest technologies to the worldwide wearable robotics community in a one-of-akind event that will gather innovators that will be defining the future of the field.

ORGANIZERS

UNIVERSITEIT TWENTE.
